Assignment Instructions

Problem statement: In the previous session on 'Introduction to Prototyping', you developed paper prototypes for DoToday, a startup working on a next-gen to-do list and task management app. Suppose the app, based on those paper prototypes, was launched and received a huge response from users. But feedback was also received that a web version of the app is needed. As the PM, you have decided to develop the web version based on the current mobile version. So you need to develop wireframes for the layout of your web app.

1. Create the required wireframes and place the screenshot of each screen on relevant slides
2. Prepare a slide showing the navigational flow for your wireframes
